DETAILED ACTION

Response to Amendment

Response to Arguments

1. Applicant's arguments, filed 03/16/2005, with respect to the claim(s) 17, 18, 21-23, 26 and 27 been fully considered but are not persuasive. Zhou et al. disclose the liner oxide overlying the conductive traces in abstract section, brief description section, claims 1, 10 and 16. Furthermore, Zhou et al. disclose the conductive traces to be polysilicon in claim 2. Finally, silicon nitride spacers with L-shaped parts consisting of 40A and 44 are shown in claims 2-5

Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 17, 18, 21-23, 26 and 27 rejected under 35 U.S.C. 102(e) as being anticipated by Zhou et al. 6,156,598)

The applied reference has a common inventor of Yelehanka Ramachandramurthy Pradeep with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e)

Art Unit: 2826

might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding Claims 17, 18, 21-23, 26 and 27, Fig. 3 and 5 of Zhou et al. disclose a lightly doped source and drain structure using an L-shaped spacer where gate electrode 22 comprises doped polysilicon as disclosed on Column 3 lines, 58-61. Gate electrode 22 is disclosed on substrate 11 with gate insulating layer 21 between them. Source and drain regions 62 are in the semiconductor substrate with polysilicon gate electrode between them. Silicon nitride spacers with L-shaped parts consisting of 40A and 44 are between the source/drain regions and touching the gate electrode 22. The figures do not show the liner oxide. However, in abstract section and in Columns 2 and 4, it is disclosed that a liner oxide layer is disposed between the gate electrode and the silicon nitride spacers.

Conclusion

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2826

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
